Windows Updates

Apply the latest Windows Update to 22H2

Navigate to <https://www.microsoft.com/en-us/software-download/windows10>

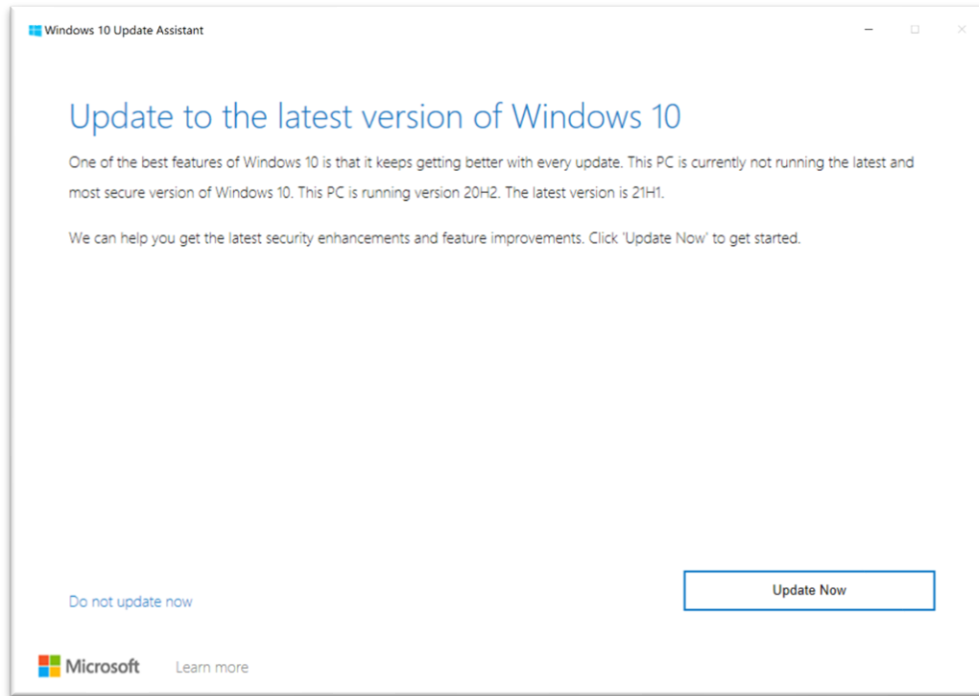

Click on the Update Now button

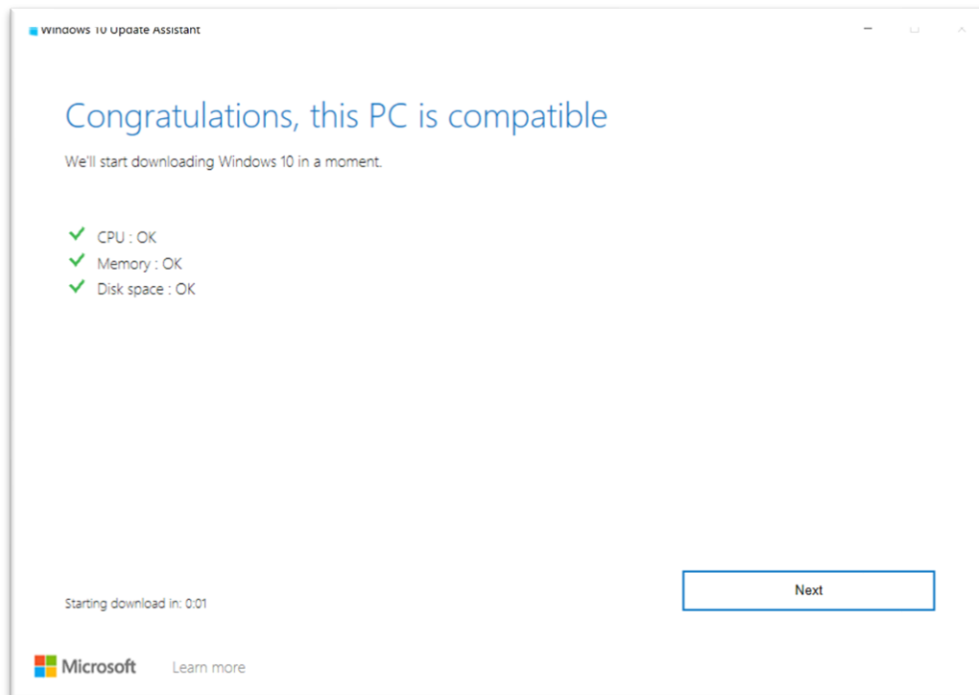

Run the downloaded EXE

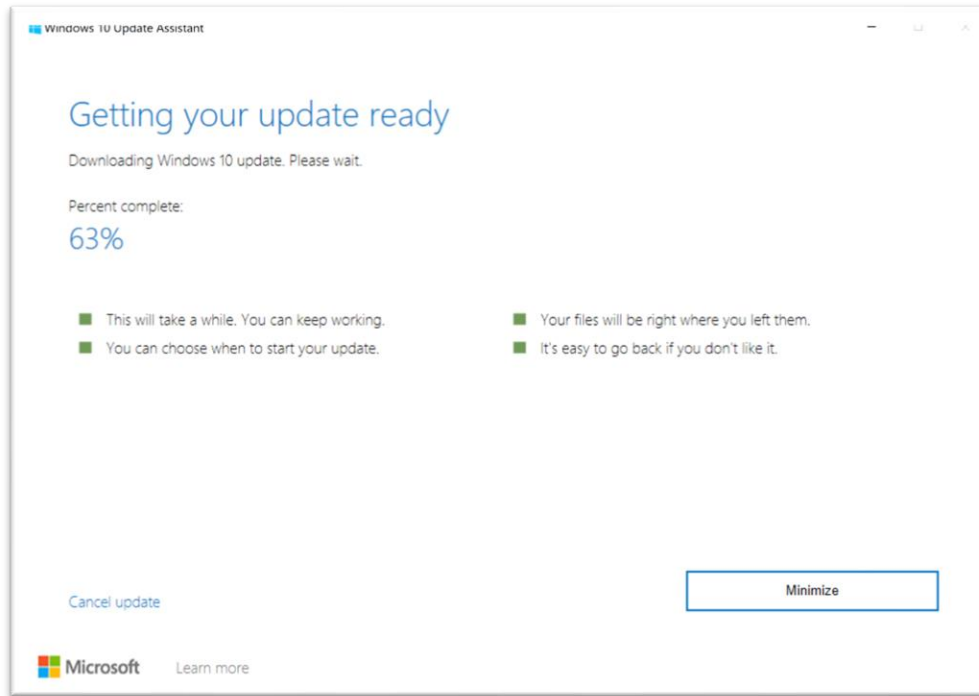

Click the Update Now button:

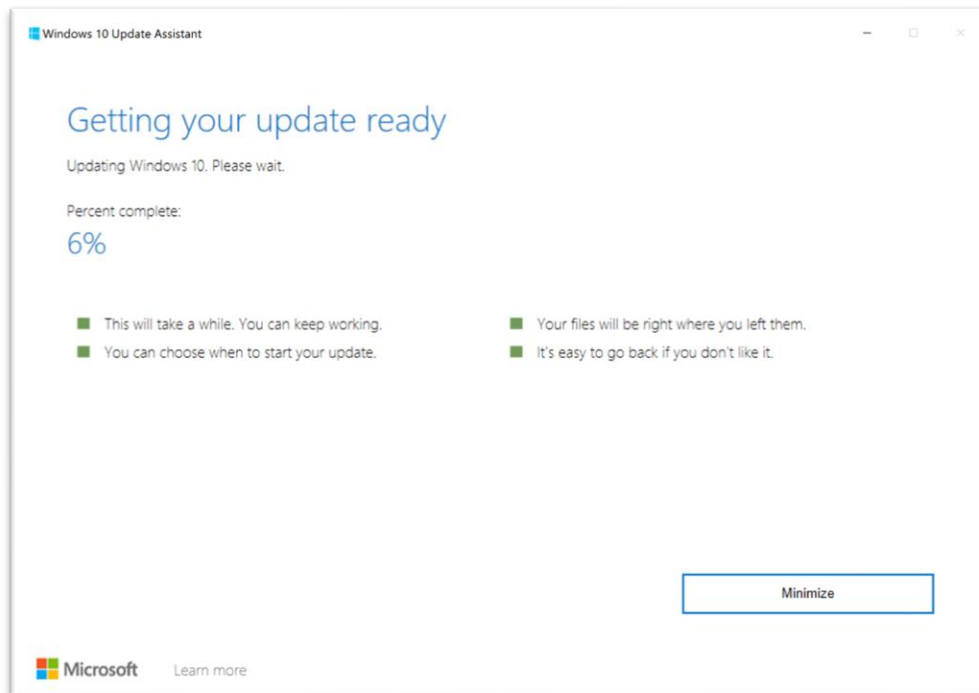

Click Next:

Wait for the download to complete:

The update should begin automatically:

Note: it will move pretty quickly to about 70% and then proceed at a slower pace. However, this laptop remains responsive even while updates are being applied.

It should take about 20-25 minutes for the update to be applied. You will then be prompted to reboot the laptop. The reboot takes about 3-5 minutes while updates are being applied.

Log in as Club-Admin again and Windows will continue applying updates. This just takes a minute or two.

Hit the Windows key on the bottom left of the keyboard and type “update”. Click on “Check For Updates”.

Your system should now be up to date:

[Change Active Hours](#)

Just below the update status (shown above), click on “Change Active Hours”:

Where it shows your current active hours, click on the blue “change” link:

Click on the End Time and change to 2:00 AM. Click on the check mark.

Active hours

Before Each Game

Note: before each game, you should go to the “Check For Updates” page and process updates. The speed at which these laptops process updates should not cause you issues as long as the updates are started at least an hour before kickoff. Ideally, they will be started one to three hours prior to kickoff.

Navigate back to the Check for Updates screen by clicking on the left pointing arrow at the top left corner of the window.

If you will not have time to process the updates before kickoff, you should click on the Pause Updates button.

Then when the game is over, process any updates.

[Advanced Options](#)

Click on the Advanced Options button:

Turn on the Update Notification:

Important: Windows will eventually force you to install updates. Please plan to process the updates each morning if at all possible to avoid an unexpected update and reboot during a game.

Enable Function Lock

The laptops are not shipped with the Function Lock enabled, but this **MUST** be enabled for proper GSIS use.

Enable this feature by holding the “Fn” (bottom left) and “Esc” key (top left).

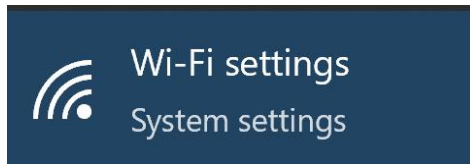

When the Function Lock is properly enabled, the ESC key at the top left will have a tiny blue-white light illuminated:

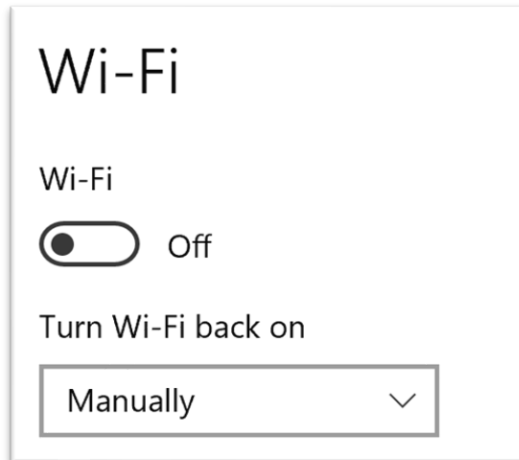

Now when the Entry operator hits F11 to record the ball snap on every play, the Time of Day and Game Clock values will be recorded properly in GSIS.

Turn off Wifi

Hit the Windows key at the bottom left of the keyboard and type “wifi”. Click on Wifi Settings:

Turn Wifi Off:

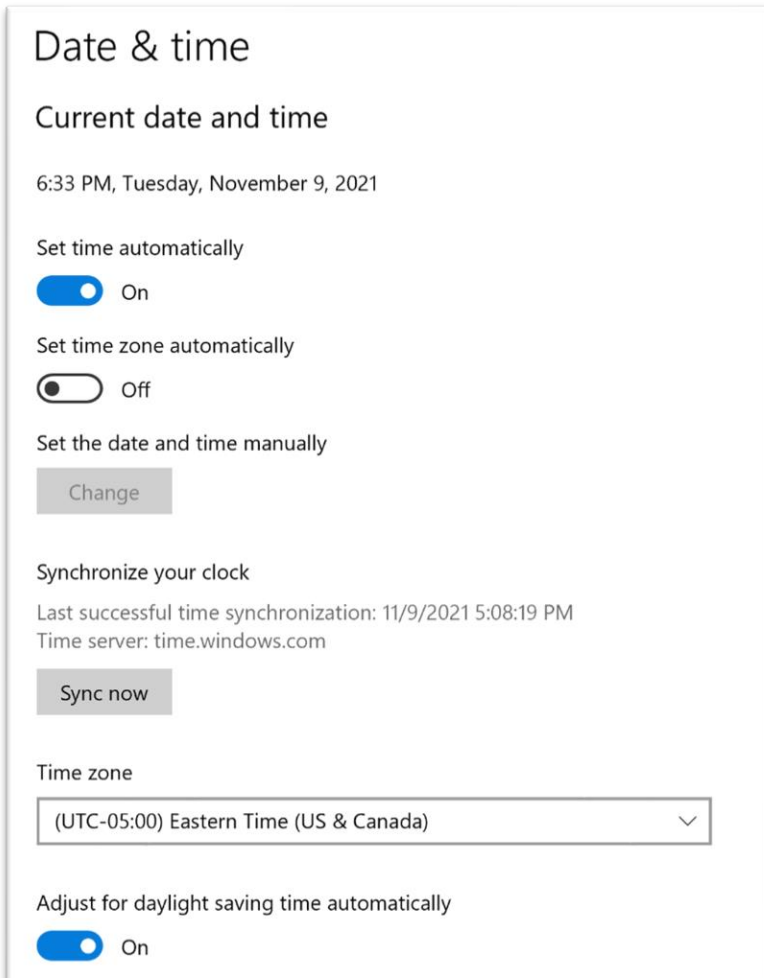

Date and Time Settings

Click on the Windows key at the bottom left of the keyboard and type “date.” Select “Date & Time Settings”:

Your settings may look like the following:

If the last successful time synchronization is not today’s date, click on the Sync Now button.

Change the Time zone drop-down to your time zone.

Turn on Num Lock

Turn on Num Lock for the 10-key number pad on the right of the keyboard.

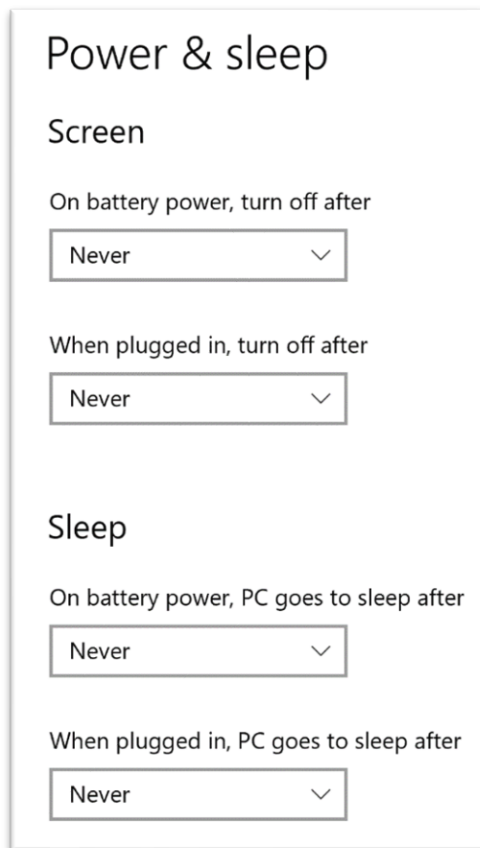

Click the Num Lock button and a tiny blue light should illuminate on the button.

Set Power and Laptop Lid Settings

Click on the Windows key and type “power” and select “Power & Sleep Settings”:

Change all power and sleep settings to Never:

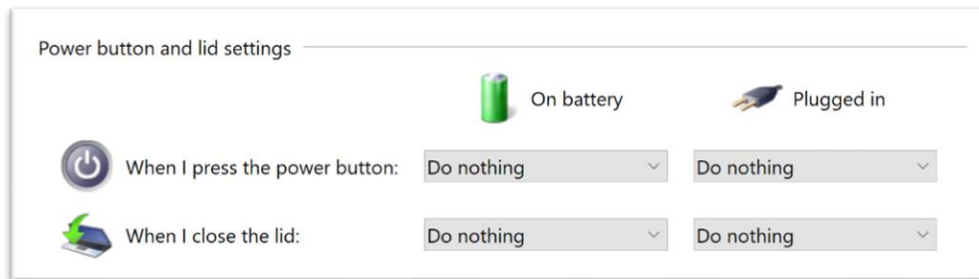

Under Related Settings, click on Additional Power Settings:

Related settings

[Additional power settings](#)

On the left, click on “Choose what closing the lid does”:

Change all Power and Lid settings to “Do Nothing”:

User Specific Settings

The next settings are user-specific.

Sign out from Club-Admin and sign in as GSIS-User

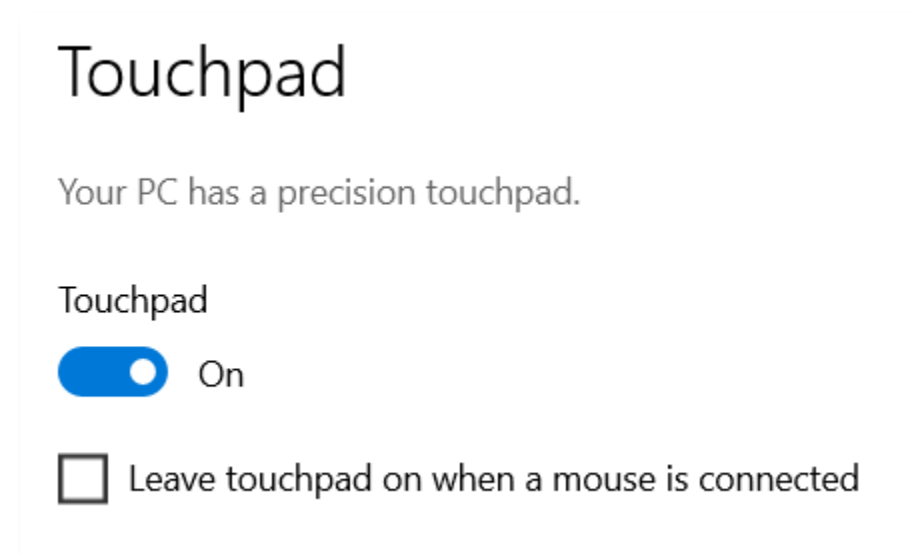

Touchpad Settings (user specific setting)

If you're connecting a mouse to the laptop, then it is probably best to disable the touchpad, as it can cause the cursor to "jump" during entry.

Click on the Windows key on the bottom left of the keyboard and type Touchpad. Click on "Touchpad Settings."

Deselect the checkbox for "Leave touchpad on when a mouse is connected":

Hide the Task Bar (user specific setting)

If your crew prefers for the task bar to be hidden, click on the Windows key and type “taskbar.”

Turn on “Automatically hide the taskbar in desktop mode.”

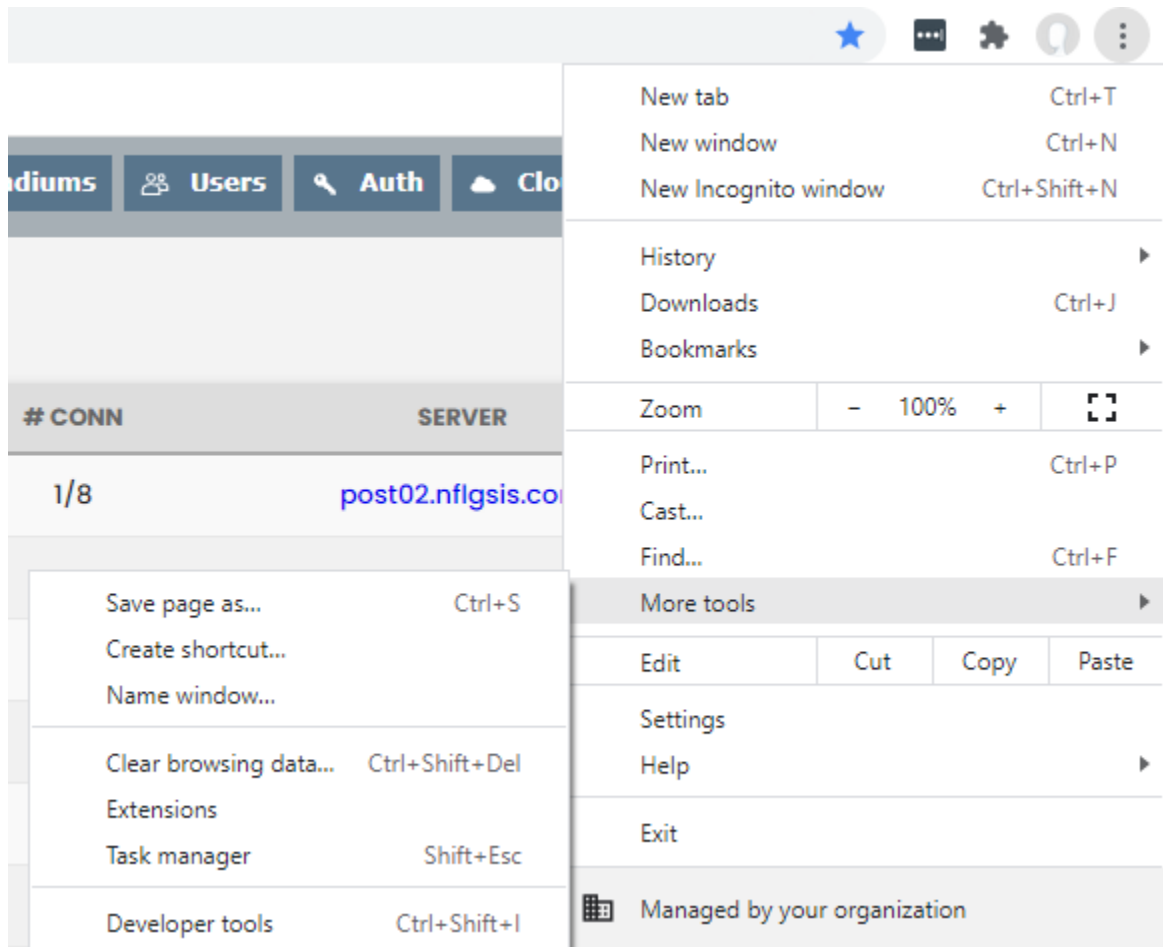

Add a Chrome Shortcut to the desktop (user specific setting)

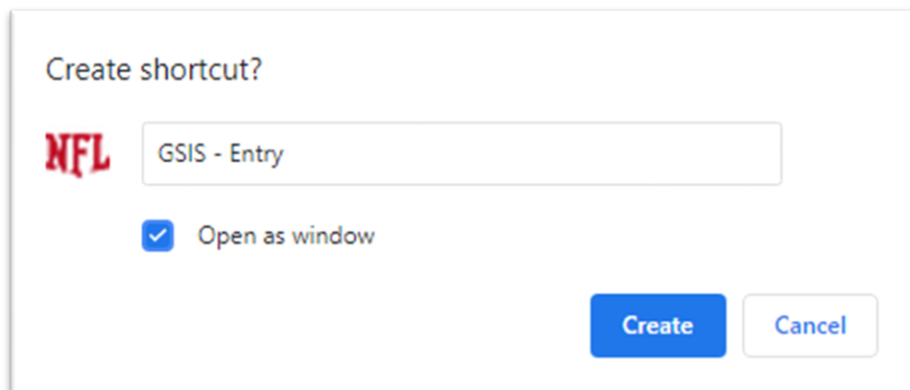

- Open Chrome
- Navigate to <https://entry.nflgsis.com> and log in
- Click the three vertical dots at the top right of Chrome:

- Select More Tools > Create Shortcut:

- Name the shortcut “GSIS – Entry” and check the “Open as Window” checkbox:

- This will open GSIS in a window without toolbars, etc.

GAMEKEY	DAY / TIME	ST	PH	VISITOR	HOME	STADIUM	CLOCK	VER	ALERTS	# CONN	SERVER

- The following shortcut will be created on the User's desktop:

Update the Windows Product Key

The new laptops have an incorrect product key. We should update those to the correct product key.

Step 1:

- Click on the Windows button at bottom left of the screen and type “Activation Settings”. At the top of the page, it will indicate Windows 10 Enterprise if the product key is wrong. A correct product key will indicate Windows 10 Pro.
- From the Activation Settings screen, click on Change Product Key. A blue box for inputting the correct product key will open.

Step 2:

- Open Power Shell in Administrator mode and type the following command (exactly) to retrieve the original product key from the Bios

```
wmic path SoftwareLicensingService get OA3xOriginalProductKey
```

Step 3

Type the product key from Step 2 into the Change Product Key dialog box from Step 1. Click the Activate button and confirm.
